## 1 Rules

This document provides quick-resolve combat tables for the board game *Steel Wolves*. These tables replace the complex procedural tactical combat found in the game while providing results similar to playing the combat phase manually. Attacks on both loners and convoys are supported by both single submarines and wolfpacks. The tables are sorted first by war period then by current torpedo value.

The following combinations of war periods and torpedo values are supported by the tables compiled in this document:

Table 1: War periods and supported torpedo values.

War Period	Torpedo value			
	-1	0	1	2
WP 1	✓	✓		
WP 2		✓	✓	
WP 3		✓	✓	
WP 4			✓	
WP 5			✓	✓

The tables are organized by submarine value, given as *attack·defense·tactical*, as they are found on the submarine counter. If a submarine does not have the exact value represented, choose the closes line on the table.

The *combat effect table* has three or more entries for each submarine. These represent either the elite skipper value from 'no skipper' (topmost) to +2 elite skipper (bottom) entry. Wolfpacks are given in size from the smallest 2-boat wolfpack up to 12-boats.

### 1.1 Using the tables

Resolve the contact roll using the regular procedure. Once you have determined the type of contact generated (eg 'loner', 'C1', 'C2') find the correct table for the correct war period and torpedo value (eg War Period 1, Torpedo value 0, 'solo vs loner'). Roll 2D10 - the first die is used to resolve two entries in the upper combat result table, while the second die roll is used for the lower Combat effects table.

Find the line with the matching or closest submarine values and modify the die roll if an elite skipper is present by the DRMs given in the same row. Note that the ships sunk and tonnage sunk tables might have different DRMs for the same sub.

### 1.2 Results

The result given in the upper half of indicates the tons sunk, while the same roll shows the number of ships sunk in the lower half of the table. Next, look up the line on the combat effects table corresponding to the

submarine and elite skipper value. Effects are noted separately for becoming spotted, having to return to base, becoming damaged or sunk or to promote the ship's skipper elite status by one level.

Each either gives a range (such as:[0 – 2]) which means that the effect will take place if the second die roll is within that range (from the example above, a die roll of 0, 1 or two creates the effect). If the range is preceded by a number with a slash (eg 2/[0 – 1]) the effect only takes place if the unmodified first die roll, from the combat result table, showed this number. Finally an added number after the range (eg [0 – 4] +1) means that the effect automatically applies to that number of boats *in addition to* the effect rolled for.

Multiple effects can take place at the same time. The skipper promotion procedure of the game is rolled into this table. A table entry of – indicates no effect.

### 1.3 Wolfpacks

Wolf packs are supported from war period 2 on and up to a maximum size of 12 participating boats. Roll normally for wolfpack congregation for each boat. Use the submarine line that resembles most of the boats. A wolfpack size DRM is used instead of an elite skipper DRM but acts similarly. Combat effects might apply to more than one boat. In this case, chose the boats receiving the effects freely.

### 1.4 Examples

A single  $3 \cdot 2 \cdot 2$  boat without elite skipper is attacking some loner in war period 1 with torpedo value of -1. Two D10s are rolled and show 6 and 2. The closest line on the chart is  $3 \cdot 3 \cdot 2$  and we will use that. No elite skipper is present to grant a DRM and the result becomes 1 ship sunk for 3 tons. Next, we see on the combat effects table that there are no effects for the boat. Play proceeds by rolling the endurance check or by rolling for another contact if it took place in Home Waters.

A single  $5 \cdot 3 \cdot 3$  boat is attacking a small convoy in war period 1 with torpedo value of 0. The boat has a +1 elite skipper. Two dice are rolled and show 2 and 4. The boat sinks 2 ships for 8 tons (DRM +2 on both tables) but is RTB after combat due to the combat effects.

A single  $2 \cdot 1 \cdot 2$  boat is attacking a large convoy in war period 1 with torpedo value of 0 and no elite skipper on board attacks a large convoy. We roll a 2 and a 1 on the dice. No ships are sunk. The sub becomes spotted and damaged and must RTB.

## 2 Tables
